```

Installation Guide

Step 1 — Extract Files

Download and extract the template package to your local machine. You will see two zip files: develop.zip and build.zip

Step 2 — Install Dependencies

For direct use on webstie:

just extract dist into your shared host public_html folder. To edit the content, you have to add them into code base.

For Development:

- 1.Extract develop.zip into your local machine.
2. Open terminal and run `npm install`
3. Run `npm run dev`
4. Start developing

5. Run ``npm run build`` when you are finished, to generate updated build
6. Follow previous instruction (for use instructions) to update your website

How to add CV as pdf

To add your cv as pdf to the project, in development mode, just add it to public folder. If you don't want to develop, just add your pdf to the main root of the project (it means paste the file beside about.html file)

Support

If you need help with customization or technical issues, please contact the template author through the marketplace support system.

Conclusion

Aragon is a complete and modern HTML template built for professionals who value clean design, strong performance, and flexibility.

With its carefully designed pages, responsive layout, modern animations, and scalable structure, Aragon helps you create impressive websites with minimal effort.

Thank you for choosing Aragon.
